FT449 Field Cut Out Instructions

1. Lay pad to be cut out face down on a working surface.
2. Precisely mark the location of the cut out on the pad's wooden backing.
3. Using a router or other cutting tool, cut out the area marked in step 2.
4. Remove the foam padding located below the wood section you just cut out.
5. Using a box cutter knife, carefully cut an "X" in the vinyl covering by cutting a line from the upper left corner of the cutout to the lower right, then cut a line from the upper right corner to the lower left.
6. Pull the 4 flaps of loose vinyl around and staple to the back side of the wooden backing.
7. Next, flip the pad over and push the FIELD CUT OUT insert into the pad from the front face. This will give the cutout area a finished look.

Repeat steps 1-7 for any additional cutouts.
